POSTERS

Integrating photovoltaics into media facades 13
Jasna Čikić Tovarović, Serbia
Adaptable PV brise-soleil design for improving building energy performance 14
Marcos Martins Borges, Brazil
Assessing photovoltaic potential of roofs and facades 15
Sara Freitas, Portugal
Cost effective building integration of solar energy systems 16
Yiannis Tripanagnostopoulos, Greece
Vertical solar panels for heating water on multi-storey buildings facades in tropical climates 17
Eduardo Castro, Brazil
Building performance simulation at the Szentágothai Research Center 18
David Santos-Blastik, Hungary
Evaluation of transparent skins for thermal and visual comforts in Mediterranean climate 19
Sofia Tzouganaki, Greece
Enlargement and energetical refurbishment of the Alpine Refuge G. Porro 20
Filippo Vannini, Italy
A study on "building skin" and "allowable limit temperature of man" 21
Masaya Saito, Japan
Towards nearly zero energy building 22
Joan Ramon Dacosta, Spain
An intelligent skin control algorithm for the enhancement of energy saving performance 23
Ki-Hyun CHOI, South Korea
Fast and simple analytical predictions of heat transfer problems for three-dimensional composites 24
Xiaoshu Lu, Finland
Building Design Towards Sustainable Urban Living 25
Rob Uittenbogard
Building skins as open border between building and territory 26
Silvia Barbero, Italy
A Study on the light-shelf system for energy saving 27
Kwon Sun Hyeon, South Korea
Performance evaluation of an outdoor fixed-type light-shelf using a reflector with holes 28
Yuchang CHOI, South Korea
Energy saving performance of a light-shelf system using Context Awareness Technology 29
Sangwon OH, South Korea

CONTENT

Smart Building Envelopes for Sustainable Building: The Energy Efficiency Center **31**
Werner Lang, Würzburg, Germany
3A-1: Bifacial building integrated photovoltaics for vertical integration **43**
Brigitte Assoa, France
3A-2: Multifunctional aspects of vertical integrated PV **49**
Marcus Rennhofer, Austria
3B-1: Adapting the Building Skin to climate regions in Japan **59**
Toshimasa Konishi, Japan
3B-2: Learning from low tech dynamic building skins **65**
Oren Ben Avraham, Israel
3B-3: Light or heavy façades: Where is the limit? **75**
Elena Pla, Spain
3B-4: Low cost-low tech: experimental bioclimatic prosthesis for social architecture in the south of Chile **83**
Leonardo Agurto Venegas, Spain
3C-1: Daylight autonomy and facade design: From research to practice for the Stockholm SEB bank head office **101**
Marja Lundgren, Sweden
3C-2: Using sunlight as a light source in building cores **113**
Liliana O. Beltrán, USA
3C-3: Retro-reflecting window film with spectral selectivity against near-infrared solar radiation for improving daylighting and mitigation of heat-island **123**
Masayuki Ichinose, Japan
3C-4: Measuring the daylighting impact of automated and manually operated shades **137**
Mudit Saxena, USA
3D-1: Phase change materials for energy saving and thermal comfort in buildings **151**
Sumin KIM, South Korea
3D-2: Phase change materials for building cooling applications **159**
Kristen Victor, USA
3D-3: PCM thermal storage as an insulation efficiency in buildings **165**
Sirikalaya Suvachittanont, Thailand
3D-4: Thermal performance of a lightweight composite textile façade **173**
Juan Manuel Ros García, Spain

CONTENT

3D-5: Solar Wall enhanced with Phase Change Materials: a detailed numerical simulation study 183
Dionysios I. Kolaitis, Greece
3D-6: Thermal behavior of a passive solar wall with silica aerogel and phase change materials 197
Pascal Biwole, France
4A-1: Dye solar cell technology for building-integrated PV applications 209
Riccardo Riccitelli, Italy
4B-1: Design methods for sustainable, high-performance building facades 217
Ajla Aksamija, USA
4B-2: Parametric driven design and fabrication for building skin 235
Ming Tang, USA
4B-3: Integrated design process for the facades of NATO Headquarters 247
Maaike Berckmoes, Belgium
4B-4: Pneusystems: prototypes for biologically inspired air-based envelope systems 257
Geoffrey Thün, USA
4B-5: Thermodynamics of the building as a shelter 275
William Braham, USA
4B-6: Façade Health (Care) Extended Envelope Lifespans through Permanence, Adaptability and De-Generation 291
Alexander Korter, USA
4C-1: Dynamic Daylighting Architecture 301
Helmut Köster, Germany
4C-2: Ceramic Louver System for Increasing Daylight Usage and Thermal Control in Buildings 321
Rosa Urbano Gutiérrez, UK
4C-3: Emergence in modular shading system based on cellular automaton 339
Machi Zawidzki, USA
4C-4: Voronoi parametric shading system 353
Alexandros Vazakas, Greece
4C-5: Harvest Shade Screens: Programming material for optimal energy building skins 365
Jonathan Grinham, USA
4D-1: Characterising the role of eco-materials in passive indoor environmental control 377
Carla Silva, UK
4D-2: Thermal testing and application of green panels using husk composited mortar 391
Sun Shijun, China

CONTENT

4D-3: Eco-sandwich as building envelope: mechanical, thermal and environmental performance 403
Angela Daniela La Rosa, Italy
4D-4: New Composite Materials of Vegetable Origin and Rapid Growth for a sustainable building ebvelope 409
Jairo Alberto Coronado Ruiz, Colombia
4D-5: ECO-material for Building Skins in Japan 425
Shinya Kaneko, Japan
5A-1: Performance analyses of innovative glassblocks for BIPV 433
Marco Morini, Italy
5A-2: Renovation of a residential building with BIPV façades to achieve the NZEB standard 443
Francesco Frontini, Switzerland
5A-3: Photovoltaic and bionic aspects of future energy-generating building skins 453
Andreas Hammer, Germany
5A-4: A scalable predesign procedure for the assessment of the solar energy share in office building facades 461
Matteo D'Antoni, Italy
5B-1: Cyber-physical systems for cognitive building skins 483
Winfried Heusler, Germany
5B-2: Thermo-chromic glazing as enhanced tool for modulating interior sensory conditions 489
Petra Liedl, USA
5B-3: Form finding and optimization of a structural steel-glass system for passive cooling and energy harvesting 497
Gerardo Masiello, Italy
5B-4: Complex geometry and façade performance 513
Won Hee Ko, USA
5C-1: Shading devices control: effective impact on daylighting contribution 527
Bernard Paule, Switzerland
5C-2: Innovative design of daylight-optimized building shapes 539
Mathias Ngo, France
5C-3: Evolutionary method to assess the interaction between lightshelves and complex ceiling forms for optimized daylighting performance 557
Rania Labib, USA
5C-4: Energy, daylighting and glare interaction in an office room with shading devices 571
Marco Manzan, Italy

CONTENT

5C-5: Optimization of the window size and the floor area ratio integrating the daylight performance ... 585
Ji-Eun Lee, South Korea
5D-1: Climate Adaptive Building Skins for tropical climates ... 603
Carolina Rodriguez and Marta D'Alessandro, Colombia
5D-2: Deep veils for the hot and wet ... 619
Erik L'Heureux, Singapore
5D-3: Development of a passive and adaptive façade element for humidity control ... 635
Bridget Ogwezi, UK
5D-4: Passive design concepts in the tropical climate ... 649
Gieto Suginato, Singapore
6A-1: Optimizing the thermal insulation of the building envelope under costs and energy considerations ... 671
Timo Kalema, Finland
6A-2: Economic assessment of solar thermal collectors for building facade renovation ... 683
Sergii Khairnasov, Ukraine
6A-3: Life-cycle cost assessment and energy performance evaluation of NZEB Enhancement for LEED rated educational facilities ... 693
Aydin Tabrizi, USA
6A-4: Life-cycle cots assessment of unglazed transpired solar air collectors and Back-pass solar air collector ... 707
Miguel A. Paya-Marin, United Kingdom
6A-5: Economic aspects of BIPV in a multi-criteria assessment of building envelope solutions ... 715
Pierluigi Bonomo, Switzerland
6A-6: Global cost in a social housing intervention ... 725
Marco Bagnasacco, Italy
6B-1: New humidity control materials for enclosed showcase in museum ... 743
Zhiqin Peng, China
6B-2: Aerogel-based coatings for energy-efficient building envelopes ... 753
Mohamad Ibrahim, France
6B-3: Aerogel based insulation for façade renovation of historical buildings ... 775
Michal Ganobjak, Slovakia
6B-4: New materials to replace glass in curtain wall facades ... 793
Valentina Covre, Italy

CONTENT

6B-5: Transparent stone: the façade of the NYU Global Center for Academic and Spiritual Life 807
Andrew Cruse, USA
6C-1: Feasibility of a micro-heat pump - Energy performance simulation 817
Fabian Ochs, Austria
6C-2: New residential scale 'Buildings as Power Stations' assessment tool 833
Ester Coma, UK
6C-3: Integrated modeling and operation support for building energy conservation 847
Hossam A. Gabbar, Canada
6C-4: Occupancy modelling in the context of building systems control 859
Ardeshir Mahdavi, Austria
6C-5: Experimental characterization of active facades 869
Imanol Ruiz de Vergara, Spain
6D-1: Current models to simulate physical behaviour of Green Roofs and Facades – A review 891
Ricardo Almeida, USA
6D-2: Micro algae bio-photo reactors over the surface of the architecture: towards the self-sufficient city 901
Rosa Cervera Sardá, Spain
6D-3: Challenges to building facade in architectural design with vertical gardens and greenhouse components 911
Agnieszka Preibisz, Germany
6D-4: An experimental investigation of the thermal effects of green walls: impact of plants obscuration on energy balance 925
Mohamed Kenaï, France
6D-5: Intersection Horticulture and Spatial Design in Vertical Landscapes 939
Hooman Kolijij, USA
7A-1: A novel user-oriented suburban renovation concept 947
Laura Sorri, Finland
7A-2: Monitoring of passive solar systems in retrofitted buildings 961
Andrea Giachetta, Italy
7A-3: Retrofitting the existing envelope of residential buildings: Innovative technologies, performance assessment and design methods 987
Gabriele Masera, Italy
7A-4: Conservation of built resources 995
Joo Heng TEH, Singapore

CONTENT

7A-5: Energy-efficient refurbishment of existing buildings 1017
Despina Serghides, Cyprus
7B-1: Mesh network intelligence in building skins and components 1027
Anders Nereim, USA
7B-2: Improving envelope effectiveness in lightweight construction with internal phase change materials (PCM) 1035
Rachel Becker, Israel
7B-3: Development of photo-catalytic coatings for the improvement of indoor air quality 1049
Andrea Giampiccolo, UK
7B-4: Climate resilience through advanced materials 1061
Martina Decker, USA
7C-1: Simulation model for adaptive building envelopes 1067
Tobias Henzler, Germany
7C-2: Ventilated Opaque Façade: Performance simulation method and assessment of simulated performance 1075
Emanuele Naboni, Denmark
7C-3: Dynamic visualization of optical and energy yield co-simulation of new generation BIPV envelope 1083
Nebojsa Jakica, Italy
7C-4: Simulation support for research and development 1091
Roel Loonen, Netherlands
7C-5: Coupling TRNSYS 17 and CONTAM: simulation of a naturally ventilated double-skin façade 1109
Ines Khalifa, Tunisia
7D-1: Solar Facades 1121
Sergio Nardini, Italy
7D-2: Natural night cooling 1135
Maxime Viot, Finland
7D-3: Solar air collectors for commercial buildings 1147
Benoit Sicre, Switzerland
7D-4: Use of hot air from the ventilated ceramic façade as heating system input 1157
Alberto Escrig, Spain
8A-1: Energetic optimization of building skins and potential applications in national administrations 1169
Árpád Csík, Hungary

CONTENT

8A-2: Strategies for the building refurbishment planning process 1181
Marta Hervías Gallardo, Germany
8A-3: Assessing the potential of building technologies for energy efficient refurbishment: a European perspective 1195
Giuliana Iannaccone, Italy
8A-4: Optimization of Building Design using Generic Simulation Model 1203
Roman Rabenseifer, Slovakia
8A-5: Application of Climate Adaptive Building Skin in building renovation 1215
Xin SHU, China
8A-6: Skin retrofits of school buildings 1225
Marco Cagelli
8B-1: Advanced architectural composite cladding 1237
Jefferson Ellinger, Germany
8B-2: New technologies for an ETFE roof to increase thermal and visual performance 1249
Markus Krauss, Italy
8B-3 Performance investigation of organic photovoltaic layers on architectural membrane 1255
Zhengyu FAN, Italy
8B-4: An high performing building skin for a free and diverse architecture 1271
Lutz Schöne, Germany
8C-1: Monitoring a Zero Net Energy Building 1279
Martin Bauer, Germany
8C-2: Multifunctional building skin for ultra-low energy construction 1295
Faas Moonen, Netherlands
8C-3: Towards ZEB - Criteria and guidelines for active energy building skins 1265
Fabiana Cambiaso, Italy
8C-4: Building Skin system for combined solar shading, daylighting, and wind harvesting 1307
David Rockwood, USA
8C-5: PLUS-Energy houses - A concept for the future 1319
Franziska Bockelmann, Germany
8C-6: Building Envelope Commissioning 1337
George F. Bourassa, USA
