CONTENT

A1-1: Benefits of translucent building envelope made of DSC-integrated glassblocks

Luisa Pastore, Università degli Studi di Palermo, Italy

A1-2: Glazed photovoltaic-thermal component for building envelope structure

Tomas Matuska, Czech Technical University, Prague, Czech Republic

A1-3: Energy, daylight and thermal analysis of a geodesic dome with a photovoltaic envelope

Marco Lovati, EURAC Research, Bolzano, Italy

A1-4: Solar-driven form finding - Functionality and aesthetics of a solar integrated building envelope

Walter Klasz, University of Innsbruck, Austria

A1-5: Designing energy generating building envelopes

Daniel Mateus, University of Lisbon, Portugal

A1-6: The importance of the basic material research for the development of innovative BIPV

Michele Pellegrino, CR ENEA Portici, Italy

A1-7: Technical challenges for the cell interconnection in a customized BIPV module

Wendelin Sprenger, Fraunhofer Institute for Solar Energy Systems, Freiburg, Germany

A2-1: Photovoltaic technologies used in the prototypes of the Solar Decathlon Europe 2014

Núria Sánchez-Pantoja, University Jaume I, Castelló, Spain

A2-2: The Ekihouse: an energy self-sufficient house based on passive design strategies

Rufino Hernández, University of the Basque Country, San Sebastian, Spain

A2-3: NexusHaus: prototype for a green alley flat

Petra Liedl, School of Architecture, University of Texas at Austin, USA

A2-4: RhOME for denCity - Inertial mass for lightweight drystone stratigraphy

Chiara Tonelli, University of Roma TRE, Rome, Italy

A2-5: A critical review of the Solar Decathlon: origins, evolution, and future

Jamie Russell, EPFL, Lausanne, Switzerland

A3-1: Integration of photovoltaics in a load-bearing timber-glass façade

Vitalija Rosliakova, Vienna University of Technology, Austria

A3-2: Photovoltaics in architecture: separating facts from fiction

Dieter Moor, ertex solartechnik, Austria

CONTENT

A3-3: The architectural potentials of solar technology in energy-efficient renovation

Roland Krippner, Technische Hochschule Nürnberg, Germany

A4-1: A size-flexible, shade robust photovoltaic system for integration in roofs and façades

Josco Kester, ECN Solar Energy, Netherlands

A4-2: Symbiosis between solar technologies in the building envelope

Chiara Tonelli, Università degli Studi Roma Tre, Rome, Italy

A4-3: Simple models for architecture with BIPVT or BIST

Christoph Maurer, Fraunhofer Institute for Solar Energy Systems, Freiburg, Germany

A4-4: Transformation of a historical coal bunker into a solar power station using multi-colored BIPV

Kerstin Müller, baubüro in situ ag, Basel, Switzerland

A4-5: Innovative solar thermal concentrating roof-integrated collector

Mauro Caini, Department of Civil, Environmental and Architectural Engineering -University of Padua

A5-1: Integration of photovoltaics in office and commercial buildings: economical and energy optimization

Valérick Cassagne, TOTAL - New Energies, Paris La Défense, France

A5-2: Fostering BIPV in the Mediterranean area

Giuseppe Desogus, University of Cagliari, Italy

A5-3: Strategies to increase the deployment of PV in façades

Christian Renken, CR Energie Sarl, Collombey, Switzerland

A7-1: Performance analysis of solar air heating systems for the refurbishment of commercial buildings

Benoit Sicre, Lucerne University of Applied Sciences and Arts, Switzerland

A7-2: Venetian blinds as a solar thermal collector in a mechanically ventilated transparent façade

Alfredo Guardo Zabaleta, Polytechnic University of Catalonia, Barcelona, Spain

A7-3: Integrating solar vacuum tubes in a high rise building façade

Walid el Baba, Webco sarl, Beirut, Lebanon

A7-4: Architectural integration of solar collectors made with ceramic materials

Jordi Roviras Miñana, Universitat Internacional de Catalunya, Barcelona, Spain

A7-5: Thermal analysis of a flat evacuated glass enclosure for building integrated solar applications

Trevor Hyde, Center for Sustainable Technologies, University of Ulster, UK

CONTENT

B1-1: Impacts of building envelope options on hospital energy performance

Heather Burpee, University of Washington, USA

B1-2: Reducing the length of stay in hospitals with daylight optimization

Helmut Köster, Köster Tageslichtplanung, Frankfurt, Germany

B1-3: Daylight quality in healthcare design

Sahar Diab, University of Jordan, Amman, Jordan

B2-1: A parametrical study for the optimization of daylighting in advanced façades

Nelly Moenssens, University of Leuven, Ghent, Belgium

B2-2: Control strategies and user acceptance of innovative daylighting and shading concepts

Michaela Reim, Bavarian Center for Applied Energy Research, Germany

B2-3: Building envelope design for enhanced daylight distribution

Erika Figueiredo, Universidade Presbiteriana Mackenzie, São Paulo, Brazil

B2-4: Light and outside vision at restaurants

Urtza Uriarte, Universitat Politècnica de Catalunya, Barcelona Tech, Spain

B2-5: Parans solar lighting system

Rawan Allouzi, Ministry of Public Works and Housing, Amman, Jordan

B3-1: Optimised solar shading control systems for passive houses in cold climates

Søren Gedsø, Erichsen & Horgen, Oslo, Norway

B3-2: Measurement method for solar heat gain coefficient of high-performance façades using small solar spectroradiometers

Takefumi Yokota, Nikken Sekkei Ltd, Tokyo, Japan

B3-3: Geometric focalization of sun rays in residential building applications

Alexandra Saranti, Technical University of Crete, Polytechneioupolis, Greece

B3-4: Comparing the efficiency of solar shading devices in reducing building cooling needs

Olivier Dartevelle, Architecture et Climat, Université Catholique de Louvain, Belgium

B3-5 Modelling of an anidolique daylight system

Daich Safa, University of Mohamed Khider, Biskra, Algeria

CONTENT

B4-1 Holistic Refurbishment

Stefan Oehler, Werner Sobek, Frankfurt, Germany

B4-2: Smart façades for existing, non-residential buildings: An assessment

Konstantinos Panopoulos, International Hellenic University, Themi, Greece

B4-3: Energy performance of existent external walls in Istanbul

Özlem Karagöz, Istanbul Technical University, Turkey

B4-4: Timber passive solar façade – an adaptive façade for the refurbishment of existing buildings

Antonio Spinelli, Politecnico di Torino, Italy

B4-5: Integrating structural glass systems in historic building facades

Meltem Nevzat, International University, Haspolat, Cyprus

B5-1: Performance based retrofitting of façades for nearly zero-energy buildings

Sheikh Zuhaib, National University of Ireland, Galway, Ireland

B5-2: Towards user-oriented plug & play façades - Upgrading the energy performance of row houses

Mieke Oostra, Hanze University of Applied Sciences, Groningen, Netherlands

B5-3: The use of BIM in the restoration of the Teatro Lirico

Lidia Pinti, Politecnico di Milano, Italy

B5-4: End effectors for an automated and robotic façade component

Kepa Iturralde, Chair for Building Realization and Robotics, TU Munich, Germany

B5-5: Retrofitting building envelopes in warm regions

Carolina Caballero Roig, Universitat Jaume I, Castellón de la Plana, Spain

B6-1: Resilience of Swiss offices to climate change: A comparison of four buildings with different façade typologies

Dominic Jurt, Lucerne University of Applied Science and Arts, Switzerland

B6-2: Building envelope: assessment and certification of its performance

Valentina Puglisi, Politecnico di Milano, Italy

B6-3: Comparing the energy efficiency of a timber curtain wall with an aluminium system

Nebojša Buljan, Permasteelisa Group, Rijeka, Croatia

CONTENT

B6-4: Optimal characteristics and dimensions of glazing components in building skins

David Kammer, Bern University of Applied Sciences, Switzerland

B6-5: A new approach for advanced building skin design and testing: the BUILDING FUTURE lab

Corrado Trombetta, Università Mediterranea di Reggio Calabria, Italy

B6-6: Design choices and thermal simulations of a test cell facility - Performance tests and building envelope components

Giulio Cattarin, Politecnico di Milano, Italy

B6-7: Condensation within building skins: temperature-gradient calculation, modelling and finite-elements simulation

Amir Hassan, WSP, Alberta, Canada

B6-8: Simulations with reflective and absorbent materials for a better acoustic quality of the building skin

Stefania Masseroni, Politecnico di Milano, Italy

B6-9: The effects of pavement albedo changes on conditioning energy use in buildings as a function of building skin properties

Pablo Rosado, Heat Island Group, Lawrence Berkeley National Laboratory, USA

B7-1: Thermal bridging assessment and its impact on the building energy performance

Katerina Tsikaloudaki, Aristotle University of Thessaloniki, Greece

B7-2: Impact of infiltrations in energy demand of a dwelling: Sensitivity to infiltrations for Mediterranean climate

Silvia Guillén-Lambea, University of Zaragoza, Spain

B7-3: Lessons of bioclimatic passive design in the Herbert Jacobs II house by Frank Lloyd Wright

Juan Sebastián Rivera Soriano, Universidad de la Salle, Bogotá, Colombia

B7-4: Validation of the PHPP program calculations in Mediterranean climates

Beatriz Rodríguez Soria, Centro Universitario de la Defensa, Zaragoza, Spain

B7-5: Commissioning and optimization of a new office building

Niels Radisch, Ramboll, Copenhagen, Denmark

C1-1: Conserving energy with biodiverse building skins

Bruce Dvorak, Texas A&M University, USA

CONTENT

C1-2: Passivhaus envelope with modular straw panels

Björn Kierulf, Createrra, Senec, Slovakia

C1-3: Environmental implications of cork as thermal insulation in façade retrofits

Jorge Sierra-Pérez, Universitat Autònoma de Barcelona, Spain

C1-4: The potential application of agro-based polymers in building façades

Mahjoub Elnimeiri, Illinois Institute of Technology, Chicago, USA

C2-1: Thermal performance of lightweight walls with phase change materials (PCM)

Efraín Moreles, National Autonomous University of Mexico, Morelos, México

C2-2: Difficulties of heat transfer from PCM type board to ambient room

Martin Zálešák, Tomas Bata University, Zlin, Czech Republic

C2-3: Simulation of the thermal performance of translucent phase change materials and whole-building energy implications

Philipp Kräuchi, Lucerne University of Applied Science and Arts, Switzerland

C2-4: Application of PCM panels of different solidus temperatures on inner wall surfaces to reduce seasonal heating/cooling loads

Craig Farnham, College of Human Life Science, Osaka City University, Japan

C2-5: Ultramarine blue pigment with thermal storage for buildings

María Isabel Arriortua, Universidad del País Vasco, Bizkaia, Spain

C3-1: Application of phase-change materials in buildings

Rami Alsayed, Saudi Aramco, Saudi Arabia

C3-2: Year-round comfortable environment in a multi-storey building by melting and solidification of PCM

Vadim Dubovsky, Ben-Gurion University of the Negev, Beer-Sheva, Israel

C3-3: Optimization of PCMs installed on walls and ceilings for light-weight residential buildings

Paulo Tabares, University of Denver, Colorado, USA

C3-4: Aerogel insulation enhanced with phase change material for energy conservation in structures

George Gould, Aspen Aerogels, USA

C3-5: Comparison of PCM-active thermal storage systems integrated in building enclosures

Vasken Dermardiros, Concordia University, Montréal, Canada

CONTENT

C4-1: Light-weight panel for buildings: an integrated optimization process

Fabio Manzone, Politecnico di Torino, Italy

C4-2: Comparing the energy saving of timber frame cladding with PUR foam insulation

Zdeněk Fránek, Technical University Liberec, Czech Republic

C4-3: A new stucco coating based on pearlescent pigments for improving wall thermal insulation

Alessandro Premier, Iuav University of Venice, Italy

C4-4: Soil as skin: ancient rammed earth and passive solar technologies in the modern age

Martin Knap, Atlin, British Columbia, Canada

C5-1: Performance assessment of advanced materials in architectural envelopes

Roberto Garay Martinez, Tecnalia, Spain

C5-2: Investigations on vacuum insulation panels based on medium sized powders

Roland Caps, VA-q-Tec, Germany

C5-3: Making thermal insulation adaptive

Nikolaus Nestle, BASF SE Advanced Materials and Systems, Ludwigshafen, Germany

C5-4: Aerogel insulation in refurbishment

Michal Ganobjak, Slovak University of Technology, Bratislava, Slovakia

C6-1: VIP in building applications

Steffen Knoll, Porextherm GmbH, Germany

C6-2: Evaluation of architectural VIP in Japan

Atsushi IWAMAE, Kindai University, Osaka, Japan

C6-3: Application of Vacuum Insulation Panels in Canada's North

Doug MacLean, Energy Solutions Centre, Whitehorse, Canada

C7-1: Application of aerogel technology in curtain wall façades

David Appelfeld, Dow Corning Belgium

D1-1: Unitised façade assemblies for high rise residential buildings

Ron Fitch, Trimo UK Ltd.

D1-2: The dynamic response of the semi-closed cavity skin to changing of load condition

Fumihiko Chiba, University of Technology, Toyohashi, Japan

CONTENT

D1-3: Technological and behavioral aspects of perforated building envelopes

Bader Alatawneh, Università degli Studi di Palermo, Italy

D1-4: Innovative block on housing in the Mediterranean climate

Calogero Montalbano, Politecnico di Bari, Italy

D1-5: Acceptance by durability: Quality assurance and insurance favour the use of innovative façades

Iris M. Reuther, Technische Universität Graz, Austria

D1-6: Including traditional architectural elements to optimize building skin

Joan Ramon Dacosta Díaz, Generalitat de Catalunya, Barcelona, Spain

D1-7: Optimum solutions to satisfy preference façades and energy consumption of an office building

Ali Alajmi, College of Technological Studies, Mishref, Kuwait

D1-8: Evolution of building envelopes through creating living characteristics

Elaheh Najafi, Iran University of Science and Technology, Iran

D2-1: Shrinkage and temperature effects in glass-concrete composite panels

Pietro Crespi, Politecnico di Milano, Italy

D2-2: Light transmitting concrete

Andreas Roye, LUCEM GmbH, Germany

D2-3: Improvement of indoor air quality using photocatalytic cement-based mortars

Chiara Giosuè, Università Politecnica delle Marche, Ancona, Italy

D2-4: Functional lightweight and air purifying concrete

Jos Brouwers, Eindhoven University of Technology, Netherlands

D2-5: Infra-lightweight concrete in multi-story residential buildings

Claudia Lösch, Technische Universität Berlin, Germany

D2-5: Experimental investigation of thermal mass in hemp-lime concrete walls

Oliver Kinnane, Queen's University, Belfast, United Kingdom

D3-1: Mechanical properties of wood-cement compounds

Daia Zwicky, University of Applied Sciences, Fribourg, Switzerland

D3-2: Wood-cement compound-based load-bearing wall elements

Niccolò Macchi, University of Applied Sciences, Fribourg, Switzerland

CONTENT

D3-3: Thermal and acoustic insulation properties of Wood-cement compounds

Alireza Fadai, Vienna University of Technology, Austria

D3-4: Numerical simulations of the overall building-physical performance of wood-cement compound-based building skins

Joachim Nathanael Nackler, Vienna University of Technology, Austria

D3-5: Combustibility of wood-cement compounds

Daia Zwicky, University of Applied Sciences, Fribourg, Switzerland

D3-6: Economic and ecological performance of wood-cement compound-based wall elements

Wolfgang Winter, Vienna University of Technology, Austria

D4-1: Energy self-sufficient Otaniemi campus

Satu Kankaala, Aalto University Properties Ltd., Espoo, Finland

D4-2: Zero-Energy Urban Quarters in moderate climates: Developing guidelines at the building and urban planning levels

Udo Dietrich and Lena Knoop, Hafencity University Hamburg, Germany

D5-1: An approach for the sustainable urban development: starting from the building

Antonella Calderazzi, Politecnico di Bari, Italy

D5-2: Zoning ordinances as tools for energy self-sufficiency

Anders Nereim, School of the Art Institute of Chicago, USA

D5-3: APEC Low-Carbon Model Town Project: Progress and Prospect

Kazutomo Irie, Asia Pacific Energy Research Centre, Tokyo, Japan

D6-1: The efficacy of policy instruments to reduce the energy use of privately owned dwellings

Bram Entrop, University of Twente, Enschede, Netherlands

D6-2: Policies to reduce market barriers for building performance

Irene Boles, Christchurch Polytechnic Institute of Technology, New Zealand

D6-3: Energy performance of buildings in Santiago, Chile: results of unregulated and high solar radiation context

Claudio Vásquez Zaldívar, Universidad Católica de Chile, Santiago, Chile

D6-4: The user's benefit as financial reference for building refurbishments

Carmen Alonso, Spanish National Research Council, Madrid, Spain

CONTENT

D6-5: The influence of end user perception on the economic feasibility of sustainable building skin renovations

Bob Bogers, University of Technology, Delft, Netherlands

D7-1: Optimization through life cycle costs analysis - Social housing retrofitting in Italy

Angela Poletti, Politecnico di Milano, Italy

D7-2: Retrofitting for social housing: A sustainable solution towards zero energy buildings

Gianpiero Evola, University of Catania, Italy

D7-3: A cost approach to evaluate sustainable building design for a social housing complex

Antonio Talarico, Politecnico di Torino, Italy

D7-4: Industrialised renovation strategies and prefabrication – Cost optimisation and added values in focus

Sonja Geier, Lucerne University of Applied Science and Arts, Switzerland

E1-1: Discomfort glare with complex fenestration systems and the impact on energy use when using daylighting control

Sabine Hoffmann, University of Kaiserslautern, Germany

E1-2: Structural sealant glazing: reinventing the wooden window

Marc Donzé, Bern University of Applied Sciences, Switzerland

E1-3: Thermal properties of door and window access systems

Wolfgang Rädle, Bern University of Applied Sciences, Switzerland

E1-4: New material for an ecological solution for wooden window frame enlargements

Urs Uehlinger, Bern University of Applied Sciences, Switzerland

E1-5: Modelling complex fenestration systems in TRNSYS – a comparison between a simplified and a detailed thermal model

Giuseppe De Michele, EURAC Research, Bolzano, Italy

E1-6: Building Elements Smart Technology (BEST) - Analysis of thermal behaviour of windows in old buildings

Pierfrancesco Prosperini, University of Camerino, Ascoli Piceno, Italy

E1-7: Measuring condensation water in the interspace of coupled windows

Max Bauer, Sapa Building Systems GmbH, Ulm, Germany

CONTENT

E2-1: Energy Frames - A new technology for intelligent glazed façades

Frederik V. Winther, Rambøll, Copenhagen, Denmark

E2-2: Analysis of potential biomimetic applications of skin and shell analogies on the building envelope

Leopoldo Saavedra, Technical University Munich, Germany

E2-3: Adaptive architectural envelopes for temperature, humidity and CO2 control

Marlén López, University of Oviedo, Gijón, Spain

E2-4: Lightweight modular structure for an energy-efficient adaptive building envelope

Maria Eftychi, University of Cyprus, Nicosia, Cyprus

E3-1: Adaptive façades Network

Andreas Luible, Lucerne University of Applied Science and Arts, Switzerland

E3-2: Monitoring energy and comfort performance of transparent adaptive façades

Valentina Serra, Politecnico di Torino, Italy

E3-3: Experimental facilities for adaptive façades characterization

Francesco Goia, Norwegian University of Science and Technology, Trondheim, Norway

E3-4: Adaptive façade systems – A review of performance requirements, design approaches, use cases and market needs

Christian Struck, Saxion University of Applied Sciences, Enschede, Netherlands

E3-5: Adaptive façades System Assessment

Shady Attia, University of Liège, Belgium

E3-6: Design for façade adaptability – Towards a unified and systematic characterization

Roel Loonen, Eindhoven University of Technology, Netherlands

E4-1: Prototyping of composite structural envelopes through CNC and robotic fabrication

Chris Knapp, Bond University, Queensland, Australia

E4-2: Advanced ceramic environmental screens

Rosa Urbano Gutierrez, University of Liverpool and Amanda Wanner, Leeds Beckett University, UK

E4-3: Metal mesh shading devices optimization by parametric approach design

Andrea Zani, Politecnico di Milano, Italy

CONTENT

E4-4: Advanced BIM tools for building planning, collaboration and analysis

Kai Oberste-Ufer, DORMA, Germany

E5-1: Exchanges between physical computing and performative parametric models

Mate Thitisawat, Florida Atlantic University, Fort Lauderdale, USA

E5-2: Application of interactive 3D visualization and computation for energy appraisal: enhancing BIM practices in small companies

Vladeta Stojanovic, Abertray University, Dundee, United Kingdom

E5-3: Lighting performance simulation and adaptive control of an advanced building skin based on human behavior inputs

Kristis Alexandrou, University of Cyprus, Nicosia, Cyprus

E6-1: Performance analyses of tensile membrane façades

Eve S. Lin, Tensile Evolution, Irvine, CA, USA

E6-2: A lightweight plug-in adaptive envelope to reduce the energy consumption of existing buildings

Stylia Gregoriou, University of Cyprus, Nicosia, Cyprus

E6-3: Coated textiles: smart wraps for old and new buildings

Katja Bernert, Mehler Technologies GmbH, Germany

E6-4: Performance analyses of the Ducati superbike pavilion

Mariangela De Vita, Università degli Studi dell'Aquila, Italy

E7-1: Climate-dependent wind-driven passive ventilative cooling potential in Central and Southern Europe

Mario Grosso, Polytechnic University of Turin, Italy

E7-2: Natural ventilation in existing buildings by hybrid draft guard

Jan de Wit, Saxion University of Applied Sciences, Enschede, Netherlands

E7-3: Advanced control of natural ventilation with solar and noise protection

Shuqing Cui, Mines Paris Tech, France

E7-4: Performance of the traditional building envelope in Malta

Antonio Mollicone, University of Malta, Iklin, Malta

F2-1: From „Building Integrated“ to „Building oriented“ Photovoltaics

Urs Muntwyler, Head, Laboratory for Photovoltaics, Berner Fachhochschule, Switzerland

CONTENT

F2-2: Hybrid, stromproduzierend und transluzent: Ein wegweisendes Fassadensystem für die Mobiliar AG Bern

Daniel Meyer, GWJARCHITEKTUR AG, Bern, Schweiz

F3-1: Concepts for mechanically biased membrane and film constructions in conjunction with standardized façade systems

Marcel Ebert, Faculty of Architecture and Urban Studies, Bauhaus University Weimar, Germany

F4-1: Sun protection and comfort - comfort by optimizing profit by building simulation

Eva-Maria Pape, Director, Institute for Energy-Efficient Architecture, University of Applied Sciences Cologne, Germany

F4-2 Optimization of building design with simulations of building energy consumption

Emil Grüniger, Soltherm AG, Altendorf, Switzerland

F4-3: Simulation of captive use for building integrated photovoltaics (BIPV)

Samuel Summermatter, Head Engineering Department, BE Netz AG, Switzerland

F4-4: Einfluss der Wärmespeicherfähigkeit auf die energetische Flexibilität von Gebäuden

Monika Hall, Fachhochschule Nordwestschweiz, Institut Energie am Bau

F5-1: Polypyrrole: Additional functions for facades made of biomaterials

Michael Sailer, Unit Innovative Technology in Construction, Saxion University of Applied Science, Enschede, The Netherlands

F5-2: Biologically-degradable building envelopes of the future

Daniel Friedrich, Engineering and Architecture, University of Lucerne, Switzerland

F5-3: Ecological and energetic aspects of facade elements made of formed TRC

Kevin Pidun, Department of Plastic, RWTH Aachen, Germany

F5-4: Phase change materials for the climate control of a residential building

Nadège Vetterli, for International Building, Engineering and Architecture, University of Lucerne, Switzerland

F5-5: Building Information Modeling in the LCA of building production

Georg Reitschmidt, Department of Construction Informatics and Sustainable Building, Technical University of Central Hesse, Giessen, Germany

F5-6: Effect of vapor-permeable and reflective materials on radiation moisture, heat transfer and durability of facades

Heinrich Thielmann, HTC, Grenoble, France
